

GNSS Workflow Procedure:

Note* these instructions are to be followed so that you can have an uninterrupted workflow.

- 1.) Power on your receiver and do not connect to it yet. (Be outside to initialize)
- 2.) Power on your MiFi, Hotspot, or Jetpack and wait about 3 minutes before connecting to your data collector.
- 3.) Power on data collector and verify your connection to the internet.
- 4.) Now open SurvCE and choose connect to last device or connect to the receiver that you are working with.

This workflow procedure allows the receiver and internet to initialize before starting to work.
